Project Highlights

- Projects that improve water quality across the County and the City, while respecting and improving sensitive lands and bodies of water surrounding our community.

- Funding for projects that:
  - Reduce stormwater impacts
  - Implement sewer infrastructure
  - Improve water quality.

- Estimated Cost: $85 million (evenly split between County and City)

Stormwater and water quality improvements play an important role in preserving and enhancing the natural environment. This funding source will support projects that seek to improve water quality across the County and City, while respecting and improving sensitive land and bodies of water surrounding our community. Such projects might provide stormwater facilities to reduce flooding, provide sewer systems and address sources of water pollution.
